

Take these 5 simple steps every spring to keep your mower running hassle free.

1

Always use fresh fuel.

Use fresh fuel that is at minimum 87 octane and no more than 10% ethanol.

2

Use a fuel stabilizer.

If you can't drain your gas before winter, use fuel stabilizer to prevent any fuel-related problems. Add it to your gas can with each fill.

3

Clean or replace the spark plug.

A clean spark plug delivers peak power and maximum fuel efficiency.

4

Change the air filter and oil.

Your mower needs a clean air filter and oil to run properly.

5

Sharpen or replace the blade.

A dull blade can cut your efficiency by 20% and leave your lawn looking bad.
